- Embedding This into Your Application
- Using The Lexical Tools with The Metathesaurus
- Building an Index Using The Lexical Tools
- Changes for 2003
- Additional Tools Developed by NLM

Lexical Tools: Introduction

- Command line tools
 - norm
 - lvg
 - wordInd
- [Web GUI](#), Lexical Gui Tool (lgt)
- [Embeddable Java API's](#)

Lexical Tools: Introduction

- These tools are good for
 - aggressive text pattern matching
 - making word, term, phrase indexes
 - matching queries with indexed entries
 - increasing recall and/or precision

Lexical Tools: Introduction

- Characteristics of all the command line tools
 - take input from the screen or a file
 - put their results to the screen or a file
 - Interpret fielded text
 - Can be told which fields contain what type of information

Lexical Tools: Norm

Lexical Tools: Norm

Lexical Tools: Norm

- Norm abstracts away from:
 - case
 - punctuation
 - word order
 - possessive forms
 - inflectional variation

 PROMISSUS STIRPEST SALVATOR MAXIMUS ORBI

This eighth-century Latin manuscript was carefully inscribed, but without spaces to mark word boundaries.

Lexical Tools: WordInd

Wordind is a tool to break terms into words.

It is used to take a row from a **Metathesaurus** table that contains a term, sentence, paragraph, story, and break the text part of that row into its constituent words.

wordind
is
a
tool
to
break
terms
into
words
it
is
used
to

Lexical Tools: WordInd

- Breaks words into tokens
- Passes other fields to output, untouched
- Lowercases
- Removes white space and punctuation

Lexical Tools: WordInd

Useful command line options for wordInd

-t[:Num]	Defines what field to tokenize
-f[:Num[:Num]]	Defines what fields get passed through

Lexical Tools: WordInd

```
> wordInd -t:7 -F:1:6
```

```
C0185495|ENG|P|L0223844|PF|S0298948|Denis-Browne splint strapping|3|
```

```

```

```
C0185495|S0298948|browne
```

```
C0185495|S0298948|splint
```

```
C0185495|S0298948|strapping
```

Lexical Tools: Lvg

Lexical Tools: Flow Components

Mnemonic	Tool
A	<u>Return known acronyms</u>
a	<u>Return known acronym expansions</u>
B	<u>Uninflect words in a term</u>
b	<u>Uninflect a term</u>
C	<u>Canonicalize</u>
c	<u>Tokenize a term into "words"</u>
ca	<u>Tokenize, keep everything</u>
ch	<u>Tokenize without breaking hyphens</u>

Lexical Tools: Flow Components

Mnemonic	Tool
Ct	<u>Retrieve the citation term</u>
d	<u>Generate derivational variants</u>
dc~N	<u>Generate derivational variants with specifying output categories</u>
R	<u>Generate derivational variants, recursively</u>
E	<u>Retrieve the unique EUI for a term</u>
f	<u>Filter output to contain only forms from lexicon</u>

Lexical Tools: Flow Components

Mnemonic	Tool
Gn	<u>Generate known fruitful variants</u>
g	<u>Remove genitive</u>
i	<u>Generate inflectional variants</u>
ici~Cats+Infls	<u>Generate inflectional variants, by Categories and inflections</u>
is	<u>Generate inflectional variants, by Categories and inflections</u>
Si	<u>Inflections to simplified inflections</u>

Lexical Tools: Flow Components

Mnemonic	Tool
L	<u>Retrieve category and inflection for a term</u>
l	<u>Lowercase</u>
N	<u>Normalize the input text in a non-canonical way (Norm)</u>
o	<u>Replace punctuations with spaces</u>
p	<u>Strip Punctuation</u>
q	<u>Strip diacritics</u>

Lexical Tools: Flow Components

Mnemonic	Tool
s	<u>Generate known spelling variants</u>
t	<u>Strip stop words</u>
u	<u>Uninvert the input phrase around commas</u>
w	<u>Sort words by order</u>
y	<u>Generate synonyms</u>
r	<u>Generate synonyms, recursively</u>

-f:is

Generate inflections noting simplified inflection tags

> lvg **-f:is**

```
cut|cut|1024|1|is|1|
cut|cutting|1024|16|is|1|
cut|cut|1024|32|is|1|
cut|cut|1024|64|is|1|
cut|cut|1024|128|is|1|
cut|cuts|1024|128|is|1|
cut|cut|128|1|is|1|
cut|cuts|128|8|is|1|
```

Lexical Tools: Uninflect by Term

-f:b

Uninflect by term

> lvg **-f:b** -SC -SI

left atria

left atria | **left atrium** | <noun> | <base> | b | 1 |

Lexical Tools: Derivations

-f:d

Generate derivations

> lvg **-f:d** -SC -SI

diagnostic

diagnostic | **diagnosis** | <noun> | <base> | d | 1 |

diagnostic | **diagnostics** | <noun> | <base> | d | 1 |

diagnostic | **diagnose** | <verb> | <base> | d | 1 |

diagnostic | **diagnostical** | <adj> | <base> | d | 1 |

Lexical Tools: Derivations

-f:dc~cats

Generate derivations, filter by category

> lvg **-f:dc~129** -SC -SI

Reduce

reduce | **reducer** | <noun> | <base> | d | 1 |

reduce | **reduction** | <noun> | <base> | d | 1 |

reduce | **reducible** | <adj> | <base> | d | 1 |

Lexical Tools: Synonyms

-f:y

Generate synonyms

> lvg -f:y -SC -SI

kidney

kidney | **nephric** | <adj> | <base> | y | 1 |

kidney | **nephritic** | <adj> | <base> | y | 1 |

kidney | **renal** | <adj> | <base> | y | 1 |

Lexical Tools: Normalize (norm)

-f:N

Remove stop words, then remove genitives, then replace punctuation with spaces, then lowercase, then uninflect each word, then take each of the uninflected words, then word order sort.

> lvg **-f:N**

Syndrome, Dry Eyes

Syndrome, Dry Eyes|**dry eye syndrome**|2047|1|g+o+t+l+B+w|1|

Lexical Tools: Installation

- Requirements
 - 2 gigabytes of space
 - Solaris/NT/Linux
 - Tar, gzip or WinZip
 - Minimum of 36 MB Memory
- Java (1.4) JREs included

Lexical Tools: Installation

```
> ./install/bin/install_solaris_sparc.sh
```

```
> .\install\bin\install_win
```

Lexical Tools: Installation

Lexical Tools: Installation

Welcome to the Java Lexical Tools Installation!

Please read the *installationNotes.html* prior to invoking this script.

This script will configure the `_LVG_DIR_/data/config/lvg.properties` file.

This script will create configured `lvg`, `norm`, `luiNorm`, and `wordind` scripts in the `_LVG_DIR_` directory.

This script, as an option, will configure and load the lexical tools into a pre-existing MySQL database. This option is only available if you already have a MySQL database running.

~~~~~

~~~~~  
The Java Lexical tools use or (may use) the following third party software packages:

- Instant DB from Enhydra.org
(see <http://instantdb.enhydra.org>)
This package is covered under an Enhydra Public License, which allows for redistribution and use with a "use notice".
- The installation script uses some GNU CYGWIN programs that have been distributed along with this script. These commands are only used when this installation is on a Windows platform. The commands that have been distributed include `tar`, `gunzip`, `rm`, `find`, `hosthame`, `tee`, and `cmp`.

The CYGWIN package is licensed under the GNU Public License. The entire CYGWIN package, along with the sources to these commands can be found at <http://sources.redhat.com/cygwin/>

Enhydra is a trademark of Lutris Technologies, Inc.

Lexical Tools: Installation

+-----Note-----+

| Although we do not support this feature, and it |
| is very likely that we will change the underlying |
| implementation, we have found it useful for our |
| applications to use an existing database system |
| other than IDB. We often use Mysql as the underlying |
| database for our applications. Since we needed a |
| way to get the lexical tools data into MySQL, we |
| figured that we would incorporate the MYSQL loader |
| into this install. |

| This option requires that an existing mysql database |
| (version 3.23 or higher) have already been installed, |
| that you have database root access privileges, |
| that the database has enough room to load this |
| data, and that the database is running now. |

+-----+

+----- **Question** -----+

| Do you want to have the lexical tools use |
| your mysql database [y/n] [n]? **n**

Lexical Tools: Installation

```

```

Lexical Tools: Installation

Congratulations!

This script has completed configuring the java lexical tools. You may invoke these tools from a command line. These tools are found in the `__LVG_DIR__/bin` directory.

You can add this `__LVG_DIR__/bin` path to your `$PATH` environment variable. This would enable you to find and run these tools from any location. In UNIX, this would be done by adding this path to your `~/.cshrc` or `~/.profile` startup script.

In Windows, this would be done by appending this path to the `PATH` variable from the control panel/System/Environment variables menus.

The lexical tools are ready to be used!

Lexical Tools:

Embedding These Tools into Your Application

Java API Documentation

Packages	
<u>gov.nih.nlm.nls.lvg.Api</u>	This package provides APIs
<u>gov.nih.nlm.nls.lvg.CmdLineSyntax</u>	Provides Java classes necessary to create a command line system.
<u>gov.nih.nlm.nls.lvg.Db</u>	Provides a higher level interface to LVG database.
<u>gov.nih.nlm.nls.lvg.Flows</u>	This package provides API of all Lvg flow components.
<u>gov.nih.nlm.nls.lvg.Lib</u>	Contains LVG general library classes of BitMaskBase, Category, Gender, Inflection, Configuration, CombineRecords, OutputFilter, Flow, GlobalBehavior, LexItem, LexItemComparator
<u>gov.nih.nlm.nls.lvg.Trie</u>	Provides the classes necessary to generate inflections, uninflections, and derivations using LVG rules tries
<u>gov.nih.nlm.nls.lvg.Util</u>	Contains LVG general utility classes of comparators, Bit operations, Case, In, Out, Strip operations, token operation, Char, Str, and Word.
